

AGUSTIN ARIAS, SOFTWARE ENGINEER

I have been coding since 2018, always looking for new challenges by participating in coding competitions on [Codeforces](#). And solving hard problems from pages such as [Codewars](#), [Project Euler](#), [Advent of Code 2019](#). Note: most **bold blue text** contains links to [github repos/webpages](#).

SKILLS

Programming

Python, HTML, CSS, Javascript, Typescript, MySQL, Bash, C++

Operating Systems

Linux (Ubuntu, Debian), Windows

Software & Tools

React, Node, Express, AngularJS, Numpy, Pyplot

Other

Git, Unix Shell (dotfiles configuration, automated tasks, etc), crontabs, Jira, Vim

Languages

Spanish (Native), English (Bilingual), German (Basic)

CERTIFICATES, ACHIEVEMENTS

- 🏆 Golden Medal in Physics (Argentinian Physics Olympiad, OAF)
- 🏆 Honor Mention in Mathematics Intercollegiate Competition (CIMA)
- 🏆 Certificate of Proficiency in English (ECPE)
- 🏆 Goethe Zertifikat A1

EDUCATION

- 📅 2019 - 2024
📍 Buenos Aires University Master's in Computer Science
- 📅 2019 - 2022
📍 Buenos Aires University Master's in Mathematics
- 📅 2021/03 - 2021/07
📍 Digital House Course, Buenos Aires Fullstack web development with React & Node

WORK HISTORY

- 📅 02/2020 - Currently
📍 Zination, Ottawa, Ontario, Canada. Fullstack Developer
Django + AngularJS & React

Focused on developing and maintaining e-commerce applications, refactoring old code and improving the overall load speed by 50%.

PERSONAL PROJECTS

DevConnector (React, Node)

This is a MERN + Typescript stack application. It is a small social network app that includes authentication, profiles and forum posts.

[Demo](#)

Dotfiles Configuration (Bash)

Here you can find my dotfiles which include backups, crontabs, .gitconfig and .gitignore, bash and zsh aliases and functions, vim customization, and config files for random programs like Vscod and Terminator (Terminal emulator similar to Tmux)

[Source Code](#)

Assembler Interpreter (Python)

I have coded a program capable of interpreting assembler code and showing a GUI detailing how the program is working. This script uses 0 libraries with the exception of [sys](#) for console i/o & [re](#) for parsing input messages.
